KPI Framework Report:Women's Home BasedBusiness Marketplace

Executive Summary

This report defines the Key Performance Indicators (KPIs) used to measure the technical, operational, user-adoption, and delivery success of the digital marketplace platform for women running home-based businesses.

The framework contains four KPI groups:

1. **System & Technical Performance:** availability, latency, and error rates.
2. **Operational & Logistic Efficiency:** order processing, delivery, and payments.
3. **UserAdoption & Engagement:** sellers, customers, listings, onboarding, and support.
4. **Project Delivery:** sprint, schedule, budget, and quality indicators.

Note on targets. Targets are industry-informed starting hypotheses for an early-stage, mobile-first marketplace. Run a 60-90 day baseline after launch, then recalibrate. Where two values appear, the format is **Launch target → Mature target**.

1. System & Technical Performance Metrics

KPI Name & Category	Definition & Description	Measurement Formula / Method	Baseline / Target
System Uptime & Availability *(Technical)*	Percentage of time the platform (web, app, API) is fully operational for users. Planned maintenance windows are excluded.	(Total minutes − Unplanned downtime minutes) ÷ Total minutes × 100 . Measured via synthetic monitoring at 1-minute intervals from 3+ regions.	**≥ 99.5% → 99.9%** monthly (about 43 min max downtime/month at 99.9%)
Critical Flow Availability *(Technical)*	Availability of the revenue-critical paths: login, checkout, payment, and order creation.	Same formula, applied to synthetic transaction tests of each flow.	**≥ 99.9%**

API Latency (p50 / p95 / p99) *(Technical)*	Server response time forAPI calls, measured at percentiles so outliers aren't hidden by averages.	Percentiles of request duration from APM logs (e.g., Datadog, New Relic, Grafana), by endpoint group.	Read endpoints: **p95 ≤ 500 ms**, p99 ≤ 1.2 s. Write endpoints: **p95 ≤ 800 ms**. Checkout/payment initiation: **p95 ≤ 1 s**
Page Load: Largest Contentful Paint (LCP) *(Technical)*	Time for the main page content to render. Measured on mid-range mobile devices over 4G, since this is the likely device profile.	Real User Monitoring (RUM) / Google Lighthouse / CrUX at the 75th percentile.	**LCP ≤ 2.5 s** (≤ 4 s at launch on 3G)
Time to First Byte (TTFB) *(Technical)*	Server and network responsiveness before the page starts rendering.	RUM, 75th percentile.	**≤ 800 ms**
Interaction Responsiveness (INP) & Layout Stability (CLS) *(Technical)*	How quickly the UI responds to taps and how stable the layout is while loading.	RUM, 75th percentile.	**INP ≤ 200 ms; CLS ≤ 0.1**
API Error Rate (5xx) *(Technical)*	Share ofAPI requests that fail with server-side errors.	5xx responses ÷ Total requests × 100	**< 0.5% → < 0.1%**
Client-Side Error Rate *(Technical)*	Share of sessions with an unhandled JavaScript or app exception.	Sessions with ≥1 unhandled error ÷ Total sessions × 100 (Sentry/Crashlytics)	**< 2% → < 1%**
Crash-Free Sessions / Users (mobile app) *(Technical)*	Share of app sessions and users that run without a crash.	Crash-free sessions = (1 − Crashed sessions ÷ Total sessions) × 100 . Same logic for users.	Sessions **≥ 99.5%**; Users **≥ 99%**

Mean Time to Detect / Resolve (MTTD / MTTR) *(Technical)*	How quickly incidents are noticed and fixed.	MTTD = Σ(detection time − incident start) ÷ # incidents . MTTR = Σ(resolution time − detection time) ÷ # incidents .	Sev-1: **MTTD ≤ 5 min; MTTR ≤ 60 min**. Sev 2: MTTR ≤ 4 h
Security Vulnerability SLA *(Technical)*	Timeliness of patching known vulnerabilities, important with payment and personal data.	Vulnerabilities fixed within SLA ÷ Total vulnerabilities found × 100	Critical ≤ 48 h, High ≤ 7 days: **≥ 95% within SLA**

2. Operational & LogisticEfficiency Metrics

KPI Name & Category	Definition & Description	Measurement Formula / Method	Baseline / Target
Seller Order Acceptance Time *(Order Processing)*	Time between a customer placing an order and the seller confirming it. Critical for home based sellers who may not be online constantly.	Median(Confirmation timestamp − Order placed timestamp)	**Median ≤ 4 h; 90% within 12 h**
Order Processing Time *(Order Processing)*	Time from seller acceptance to the order being packed and ready for pickup or dispatch.	Median(Ready-for dispatch timestamp − Acceptance timestamp) , segmented by in-stock vs. made-to-order	In-stock: **≤ 24-48 h**. Made-to order: within the seller-declared lead time (**≥ 90% adherence**)
Order Fulfillment Rate *(Fulfillment)*	Share of placed orders successfully completed and delivered.	Delivered orders ÷ Total orders placed × 100	**≥ 92% → ≥ 96%**
Seller Cancellation Rate *(Fulfillment)*	Orders cancelled by the seller (stock outs, unavailability).	Seller-cancelled orders ÷ Total orders × 100	**≤ 5% → ≤ 3%**
End-to-End Fulfillment Cycle Time *(Fulfillment)*	Total time from order placement to delivery confirmation.	Median(Delivered timestamp − Order placed timestamp)	Same city: **≤ 3 days**. Inter-city: **≤ 5 days**

On-Time Delivery Rate (OTD) *(Logistics)*	Share of orders delivered on or before the promised date.	Orders delivered by promised date ÷ Total delivered orders × 100	**≥ 90% → ≥ 95%**
First-Attempt Delivery Success *(Logistics)*	Deliveries completed on the first try without re attempt.	Orders delivered on attempt 1 ÷ Total dispatched orders × 100	**≥ 80% → ≥ 88%**
Delivery Failure / Return-to-Seller Rate *(Logistics)*	Orders that cannot be delivered and are returned or lost.	(Failed + Lost deliveries) ÷ Total dispatched × 100	**≤ 4% → ≤ 2%**

Payment Success Rate *(Payments)*	Share of payment attempts that complete successfully, excluding customer abandoned or intentionally declined attempts where identifiable.	Successful payments ÷ Total payment attempts × 100 (per method: card, wallet, COD-confirm)	**≥ 95% → ≥ 98%**
Gateway Technical Failure Rate *(Payments)*	Payment failures caused by gateway/system errors rather than user or bank decisions.	Gateway-error transactions ÷ Total payment attempts × 100	**< 1% → < 0.5%**
Dispute / Chargeback Rate *(Payments)*	Share of transactions disputed by customers.	Disputes opened in period ÷ Total transactions in period × 100	**< 1% → < 0.5%** (card networks typically flag programs at ~0.9-1%)
Refund Rate *(Payments)*	Share of orders refunded fully or partially.	Refunded orders ÷ Total completed orders × 100	**≤ 5% → ≤ 3%**
Seller Payout Timeliness *(Payments)*	Share of payouts delivered to sellers within the promised window. Trust in payments is vital for sellers new to online business.	Payouts completed within SLA ÷ Total payouts × 100	**≥ 95% within T+3 business days → 99% within T+2**

Payment Reconciliation Accuracy *(Payments)*	Match between platform records and gateway/bank settlements.	Matched transactions ÷ Total transactions × 100	**≥ 99.9%**

3. User Adoption & Engagement Metrics (Sellers & Customers)

KPI Name & Category	Definition & Description	Measurement Formula / Method	Baseline / Target
MonthlyActive Sellers (MAS) *(Seller Engagement)*	Unique sellers who performed a meaningful action in the last 30 days (login plus a listing update, order action, or a sale).	Count of unique sellers with ≥1 qualifying action in the calendar month	**Seller activity rate ≥ 50% → ≥ 65%** of registered sellers. Set an absolute MAS goal per phase (e.g., 300 by month 6, 1,000 by month 12; adjust to your market size)
Transacting Sellers Rate *(Seller Engagement)*	MAS who received at least one order in the month, indicating real commercial activity.	Sellers with ≥1 order ÷ MAS × 100	**≥ 40% → ≥ 55%**
Active Listings *(Catalog Health)*	Published, in-stock, visible product listings.	Count of listings with status = published AND stock > 0	Avg **≥ 8 active listings per active seller**; total grows **≥ 10% MoM** during the first 6 months
Listing Quality Score *(Catalog Health)*	Share of listings meeting minimum standards (≥3 photos, description ≥ 50 words, price, category, lead time).	Compliant listings ÷ Active listings × 100	**≥ 70% → ≥ 85%**
Stale Listing Rate *(Catalog Health)*	Active listings not updated or ordered in 90 days.	Stale listings ÷ Active listings × 100	**≤ 25% → ≤ 15%**
Seller Onboarding Completion Rate *(Adoption)*	Sellers who complete all onboarding steps (profile, identity/verification, payout setup, first listing) out of those who started.	Sellers completing all steps ÷ Sellers who started registration × 100	**≥ 60% → ≥ 75%**

Time to First Listing *(Adoption)*	How fast new sellers become "live".	Median(First listing published − Registration timestamp)	**≤ 48 h → ≤ 24 h**
SellerActivation Rate *(Adoption)*	New sellers who publish a listing within 7 days. A follow-on metric is first sale within 30 days.	New sellers with listing in 7 days ÷ New sellers × 100	Listing in 7 days: **≥ 60%**. First sale in 30 days: **≥ 35% → ≥ 50%**
Customer Registration-to First-Purchase Conversion *(Adoption)*	Customers who buy within 30 days of signing up.	New customers with ≥1 order in 30 days ÷ New registrations × 100	**≥ 10% → ≥ 18%**
Repeat Purchase Rate *(Customer Engagement)*	Customers who order again within 90 days.	Customers with ≥2 orders in 90 days ÷ Customers with ≥1 order × 100	**≥ 20% → ≥ 30%**
Seller Retention (90-day) *(Seller Engagement)*	New sellers still active 90 days after onboarding.	Sellers active in month 3 ÷ Sellers onboarded in cohort × 100	**≥ 50% → ≥ 65%**
First Response Time (FRT) *(Support)*	Time from ticket creation to first human response.	Median(First reply timestamp − Ticket created timestamp)	**≤ 2 business hours** (auto acknowledge instantly)
Support Ticket Resolution Time *(Support)*	Time from ticket creation to resolution.	Median(Resolved timestamp − Created timestamp) , by priority	**Median ≤ 24 h; 90% within 48 h**. Urgent payment/order issues ≤ 4 h
First Contact Resolution (FCR) *(Support)*	Tickets resolved in the first interaction without follow-up.	Tickets resolved on first contact ÷ Total resolved tickets × 100	**≥ 70% → ≥ 80%**
Customer Satisfaction (CSAT) *(Support)*	Post-resolution satisfaction rating.	Positive ratings (4-5) ÷ Total survey responses × 100	**≥ 80% → ≥ 90%**
Support Ticket Volume per 100 Orders *(Support)*	A proxy for product friction and usability issues.	Tickets ÷ Orders × 100	**≤ 12 → ≤ 6**

4. Project Delivery Metrics

KPI Name & Category	Definition & Description	Measurement Formula / Method	Baseline / Target
Sprint Goal Completion Rate *(Delivery)*	Share of committed story points delivered per sprint.	Completed points ÷ Committed points × 100	**≥ 80-90%**
Milestone On-Time Delivery *(Delivery)*	Milestones met by their planned date.	Milestones on time ÷ Total milestones due × 100	**≥ 90%**
Schedule & Budget Variance (SPI / CPI) *(Delivery)*	Earned-value indicators of schedule and cost health.	SPI = EV ÷ PV ; CPI = EV ÷ AC	**SPI and CPI between 0.95 and 1.10**
Defect Escape Rate *(Quality)*	Bugs found in production vs. total found.	Production defects ÷ (Production + Pre-release defects) × 100	**≤ 10%**
Automated Test Coverage (critical modules) *(Quality)*	Code covered by automated tests in payment, order, and auth modules.	Coverage report from CI	**≥ 80%**
Deployment Frequency / Change Failure Rate *(DevOps)*	How often releases ship and how often they cause incidents.	Deploys per week ; Failed deployments ÷ Total deployments × 100	**≥ 1 deploy/week; failure rate ≤ 15%**
Requirements Change Rate *(Scope)*	Scope volatility after sprint planning.	Changed/added stories mid-sprint ÷ Planned stories × 100	**≤ 10%**

5. Governance & Reporting

Item	Recommendation
Review cadence	Technical KPIs: real-time dashboard plus weekly review. Operational: weekly. Adoption: weekly to monthly. Delivery: per sprint. Executive summary: monthly.
RAG thresholds	**Green:** at or better than target. **Amber:** within 10% of target. **Red:** worse than 10% off target, which triggers a corrective action plan.

KPI ownership	Tech Lead/DevOps for Section 1, Operations Manager for Section 2, Product Owner and Community/Support Lead for Section 3, Project Manager for Section 4.
Segmentation	Break down by city/region, seller cohort, product category, device type, and payment method to uncover hidden issues.
Recalibration	Review targets after 90 days of live data, then quarterly.
Suggested tooling	APM (Datadog/New Relic/Grafana), RUM and crash reporting (Sentry/Firebase Crashlytics), product analytics (Mixpanel/Amplitude/GA4), helpdesk (Zendesk/Freshdesk), and a BI dashboard (Metabase/Looker Studio).
